IGBT and MOSFET Discrete

IXGK 60N60B2D1	(Example)
IX	IXYS
	Die technology
B	High voltage BIMOSFET
D	NPT-IGBT with SCSOA capability
E	NPT ³ IGBT
F	HiPerFET™ Power MOSFET
G	Fast IGBT
K	CoolMOS
L	IGBT with SCSOA capability
S	IGBT with SCSOA capability
T	Standard Power MOSFET
U	Trench MOSFET
	Housing type
A	TO-263 (D ² PAK)
B	PLUS 264 (TO-264 without mounting hole)
C	ISOPLUS220 (TO-220 DCB isolated)
E	ISOPLUS227 (DCB isolated miniBLOC)
F	ISOPLUS-i4 (DCB isolated)
H	TO-247
J	TO-268 (I3 PAK)
K	TO-264
L	ISOPLUS 264 (TO-264 DCB isolated)
M	TO-204 (TO-3)
N	SOT-227 B (miniBLOC)
P	TO-220
Q	TO-3P
R	ISOPLUS 247 (TO-247 DCB isolated)
T	TO-268 (D ³ PAK)
U	TO-251 (D PAK)
V	PLUS 220 (TO-220 footprint without mounting hole)
X	PLUS 247 (TO-247 without mounting hole)
50	Current rating, 50 = 50 A MOSFET = value at T _C = 25°C IGBT = value at T _C = 90°C
N	N-channel type
P	P-channel type
60	Voltage class, 60 = 600 V
xx	MOSFET
A	Prime R _{DS(on)} for standard MOSFET
Q	Low gate charge die
Q2	Low gate charge die, 2nd generation
P	PolarHT™ Power MOSFET
L	Linear Mode MOSFET
	IGBT
--	No letter, low V _{CE(sat)}
A	Or A2, std speed type
B	Or B2, high speed type
C	Or C2, very high speed type
xx	
D	Integrated HiPerFRED™ diode
H	Integrated SONIC-FRD™ diode
U	Integrated FRED diode
1	Antiparallel diode (free wheeling diode)
2	Diode in boost configuration
3	Diode in buck configuration

IGBT and MOSFET Modules

MII 200-12A4	(Example)
F	ISOPLUS-I4
M	Module
V	Module
C	Thyristor
D	Diode
I	IGBT with SCSOA capability
M	MOSFET
W	Three phase bridge
U	Uncontrolled 3 phase input rectifier
C	Thyristor
D	Diode

DE Linear and Switch Mode Series

The patented DE-SERIES Fast Power™ MOSFETs are in a new class of unique high power transistors designed as a circuit element from the ground up for high speed, high frequency, high power applications at frequencies up to 100 MHz. DEI's Fast Power™ technology features low insertion inductance (≤ 1.5 nH), and a low profile package, with

$R_{(\theta JA)HS}$ as low as 0.17°C/W, which provides exceptional switching speeds and power handling capabilities. The DE-Series MOSFETs offer 10 times the speed and 3 times the thermal dissipation, with $\frac{1}{2}$ the volume, $\frac{1}{3}$ the weight and greatly reduced die stress, of comparable conventional power MOSFET devices.

Features

- Isolated Substrate
 - high isolation voltage (> 2500 V)
 - excellent thermal transfer
 - increased temperature and power cycling capability
- IXYS advanced low Q_g process
- Low gate charge and capacitances
 - easier to drive
 - faster switching
- Low $R_{DS(on)}$
- Very low insertion inductance (≤ 1.5 nH)

Advantages

- Optimized for RF and high speed switching at frequencies to 175 MHz
- Higher voltages - lower DC current requirements, higher load impedances, reduced system size and weight, simplifies paralleling of devices
- Easy to mount - no insulators needed
- High power density

Applications

- RF Power Amplifiers
- High Frequency SMPS
- Laser Diode Drivers
- RF Power Generators
- Induction Heating
- High Speed Pulse Generators

The DEIC 420 ultra-fast high current driver is optimized to drive DEI DE-Series MOSFETs for high efficiency performance in RF generators, laser diode drivers, pulse generators, and high frequency power conversion applications. It is designed to switch power MOSFETs with

minimum switching times at frequencies to 45 MHz. The innovative DEIC 420 is manufactured in DEI's patented low-inductance RF package, offering superior thermal performance and high continuous operating frequencies.

Features

- Wide operating voltage range from 8 V to 30 V
- Very low output impedance
- No internal cross conduction which allows operating frequencies to 45 MHz
- Latch-up protected to rated reverse current
- Output Current - up to 20 A peak
- Very low thermal impedance
- Matched rise and fall times
- Evaluation Board available

Applications

- Class D and E RF Generators
- Laser Diode Drivers
- High Frequency Power Factor Correction
- Acoustic Transducer Drivers
- High Frequency SMPS
- Pulse Generators

Hybrid Microwave Modules

- Miniature, Low Cost for Drop In Hybrid Applications
- Low Noise, High Gain, and High Power Options
- Gain Block, Temp Comp, and Regulator Options
- Low VSWR for Improved Cascade Performance
- Single Voltage Supply and Low Current Design
- Using MwT's Space-Qualified GaAs and Thin Film Substrates
- 100% Eutectic Assembly Technique Assure High Reliability
- Standard and Customer Specific Specifications
- Connectorized Amplifier Options Upon Request
- High-Rel and Space-Rel Screening Available

Contact factory for application assistance on custom and standard amplifiers. High-Rel and Space-Rel screening available.

- Ultra Linear, High Dynamic Range, Low Phase Noise
- GaAs Process is Approved for Space Applications with Proven Reliability
- Commercial, Industrial, Military, and Space Grades
- 100% Wafer Bond Pull, Die Shear, Wafer DC Burn In, and Bake Tests in Evaluation per mil-PRF 385 & 4
- 100% Die Probe Test with Data Recorded for Shipment
- 100% Visual (Perform Level 1, 3, or 4) before Shipment
- 100% Idss Match to Provide Performance Consistency
- RF Sample Test Capability Available Upon Request
- Meet Standard or Customer Specific Specifications
- High-Rel and Space-Rel Screening Options Available
- RoH5 (lead-free) compliant product available

Wireless Amplifiers (MPS, ULA and WPS WiMax)

- Miniature, Low Cost, SMT, Flange, & Leadless Options
- Miniature, High Reliability, Hermetic SMT Options
- Low Noise, High Linearity, and Broad Band Options
- Suitable for High Dynamic Range LNA and Receiver
- Suitable for High Linear Driver Amp Gain Stages
- Low VSWR for Improved Cascade Performance
- Single Voltage Supply and Low Current Design
- Uses MwT's Space-Qualified GaAs Devices
- Most Parts are Eutectic Assembly for High Reliability
- Standard and Customer Specific Specifications
- High-Rel and Space-Rel Screening Available (class H, K, and S)

Optically Isolated Solid State Relays

The **OptoMOS** line of Solid State Relays uses discrete semiconductor components and the patented OptoMOS architecture to deliver fast, reliable, bounce-free switching in a compact design. From the world's smallest single-pole, high-voltage, 4-pin relay to multi-pole and multifunction devices, OptoMOS products are an ideal solid state replacement for larger reed and electromechanical relays. Compared to older electromagnetic technologies, the Clare OptoMOS relays offer significantly lower drive current, small package size, no susceptibility to magnetic interference and solid-state reliability. All of these are key requirements for the design of today's

complex low-power, multichannel products.

The small single pole 4-pin SOP relays combine our state-of-the-art, double-molded, vertical-construction packaging with high performance to give you a reliable product with 20% savings in board space compared to other 4-pin products.

Dual pole OptoMOS relays combine two independent relays into a single 8-pin package paving the way for designers to condense functionality using a single component. Common input OptoMOS relays provide a design alternative where two independent outputs are driven by the same input signal.

Features

- Low drive current
- High reliability
- No EMI/RFI generation
- Arc-free with no snubbing circuits
- Machine insertable, wave solderable
- AC/DC switching
- Current limiting (available)
- FCC compatible
- Low off state leakage

Applications

- Telecommunications/Datacommunications
- Instrumentation
- Multiplexers
- Data acquisition/Electronic switching
- I/O subsystems
- Meters (watt-hour, water, gas)
- Medical equipment (patient/equipment isolation)
- Security
- Aerospace
- Industrial controls

Single Pole Normally Open: 1-Form-A - Operational temperature range of -40° to 85°C

Block diagram

The **OptoMOS** line of power products use dual power SCR outputs to produce an alternative to optocoupler and Triac circuits. These AC- Power Switches are robust enough to provide a blocking voltage of up to 800V_P. In addition, tightly controlled zero-cross circuitry ensures switching of AC loads without the generation of transients. The input and output

circuits are optically coupled to provide 3750V_{rms} of isolation and noise immunity between control and load circuits. Long life and environmental integrity make these power switches ideal to control a variety of AC circuits in industrial environments where electromagnetic interference would disrupt the operation of electromechanical relays.

Features

- Load current up to 2 A
- Blocking voltage up to 800 V_P
- 5m A sensitivity
- Zero-crossing detection
- DC control, AC switching
- Optically isolated I/O
- TTL and CMOS compatible
- Low EMI and RFI generation
- High noise immunity
- VDE compatible
- Machine insertable, wave solderable
- Switching speed < 0.5 cycle

Applications

- Programmable controls
- Process control
- Power control panels
- Remote switching
- Gas pump electronics
- Contactors
- Large relay control circuits
- Solenoids
- Motor controls
- Heater controls

Operational temperature range of -40° to 85°C

Power Solid State Relays

(Power dissipation greater than 1 Watt)

Power SIP, ISOPLUS™-264 and i4-PAC™ Relays

Clare and IXYS have joined forces to bring OptoMos technology, reliability and compact size to the new Power SIP, i4-PAC and ISOPLUS-264 series of power solid state relays. Development of these new products was founded on the blending of Clare's traditional strengths in the design and manufacture of photovoltaic integrated circuits (ICs), lead-frame design and multichip packaging with IXYS' expertise in power MOSFETs, power packages and substrate technology.

The optically coupled MOSFET technology provides 2500V_{rms} of input to output isolation. Similar to Clare's solid state relays, the optically coupled output is controlled by a GaAlAs infrared LED.

Clare Power Relays are now offered in three package types: the **Power SIP**, the **i4-PAC**, and the **ISOPLUS-264**. The Power SIP package offers pin-to-pin compatibility with other solid state relays providing an easy upgrade path for existing designs and compatibility for new designs.

The i4-PAC and the ISOPLUS-264 packages feature a unique assembly process whereby the silicon is soft soldered onto a Direct Copper Bond (DCB) substrate rather than traditional bonding onto an epoxy encapsulated copper frame. This structure allows for a substantially lower junction-to-case thermal impedance when compared to conventionally assembled power relays. The i4-PAC thermal resistance is 0.35°C/W while the ISOPLUS-264 has an even lower impedance of 0.30°C/W.

Although exposed on the backside of these packages, the electrically non-conductive surface of the DCB ceramic substrate provides 2500V_{rms} of isolation to the package's electrically conductive power switching and control leads.

The combination of an electrically isolated non-conductive exterior and low thermal impedance makes the new i4-PAC and ISOPLUS-264 power relays an ideal solution for power applications preferring a non-biased heat sink with superior thermal management properties.

Features

- Handles loads up to 9A
- Voltage ratings up to 1000V_p
- Low On-resistance
- Non-conductive thermal pad for heat sink applications
- Industry standard 4-Pin SIP package
- Low input control current
- Low thermal impedances:
0.30°C/W - ISOPLUS-264
0.35°C/W - i4-PAC
1.5°C/W - Power SIP

Applications

- Motor controls
- Robotics
- Medical equipment
- Railroad/traffic controls
- Consumer appliances
- Industrial control
- Test and measurement equipment

Package Dimensions

OptoMOS Linear Optocouplers feature an infrared LED optically coupled to a pair of phototransistors. One feedback (input) phototransistor is used to generate a control signal that provides a servomechanism to the LED drive current thus compensating for the LEDs nonlinear time and temperature characteristics. The output phototransistor provides an isolated output signal that is linear with respect to the servo LED current.

OptoMOS Linear Isolation Amplifiers integrate a linear optocoupler with two independent LF356 op-amps in a single 16-pin package. These amplifiers can couple both AC and DC signals in either uni-polar or bi-polar modes, while providing 3750V_{rms} of input/output isolation. Using a servo control loop to compensate for the nonlinear time and temperature characteristics of the LED, these amplifiers distinguish themselves among conventional optocouplers by significantly improving linearity and stability.

Features

- Couples analog and digital signals
- 3750V_{rms} input/output isolation
- Wide bandwidth (>200kHz)
- High gain stability
- Low input/output capacitance
- Low power consumption
- 0.01% servo linearity
- THD 87dB typical
- Machine insertable, wave solderable
- VDE compatible

Applications

- Modem transformer replacement with no insertion loss
- Digital telephone isolation
- Power supply feedback voltage/current
- Medical sensor interfacing
- Isolation of process control transducers

Operational temperature range of -40° to 85°C

Block Diagrams

Optically Isolated Linear Error Amplifiers combine Clare's optical technology with an industry standard 431-type precision programmable shunt regulator to provide linear isolated feedback for power supply designs. The LIA120 features matched photodiodes for linear high-gain response exhibiting excellent temperature stability for a total gain error of less than 2 dB.

These devices are well suited for isolated high-gain feedback amplifiers that require excellent linearity and low temperature variation such as power supply feedback stages, modem and audio transformer replacements, industrial control signals, and sensor feedback.

Features

- Fully Matched IC
- 70dB Linearity (typ.)
- Optocoupler, precision reference and error amplifier in single package
- Low voltage operation 2.7V

Applications

- Power supply feedback
- Telecom central office supply
- Telecom bricks
- Modem transformer replacement

Operational temperature range of -40° to 85°C

Single and Dual Optocouplers

Single and dual OptoMOS products provide an optically isolated means of current detection or control of switching circuits. Devices offer a single or dual antiparallel LED input stage for unidirectional or bidirectional signal control to the optically coupled phototransistor output. The phototransistor output can be either a single transistor or, for greater gain, a darlington transistor.

These optocouplers allow for either AC or DC input circuits and are ideal for telecom, industrial control and instrumentation circuits where electrical isolation of control circuitry is crucial.

Features

- AC and DC compatible inputs
- 3750V_{rms} input/output isolation
- Machine insertable, wave solderable

Applications

- Telecom switching
- Tip/ring circuits
- Modem switching (laptops, notebooks, PDAs)
- Loop detection
- Ringing detection
- Current sensing

Operational temperature range of -40° to 85°C

The OptoMOS line of Multifunction products combines optically-isolated discrete component functions into a single package. These products mix and match solid-state relays, optocouplers, bridge rectifiers, Darlington transistors and zener diodes to

create highly functional circuits in a single, small package. Multifunction devices allow designers to consolidate circuit functions into a single device, freeing up valuable board space and reducing component count.

Features

- 3750V_{rms} input to output isolation
- Multiple functionality in single package
- Current limiting (part numbers with L suffix)
- Machine insertable, wave solderable
- TTL and CMOS compatible

Applications

- Telecommunication/Datacommunication
- Instrumentation
- I/O subsystems
- Electronic switching
- Medical equipment (patient/equipment isolation)
- Security
- Aerospace
- Industrial controls

The CPC1465 provides a polarity-insensitive DC termination for wetting (sealing) current on the CPE side conforming to ITU-T G.991.2 to eliminate corrosion on xDSL/ISDN lines. The CPC1465 has excellent linearity (70dB typ.) to minimize harmonic distortion and well-controlled turn-on and turn-off characteristics to minimize injecting impulse noise with in-band signal energy into the DSL channel.

This DC termination IC which interfaces with the tip/ring pair is rated at 300V and able to handle power cross and light-nig transients with appropriate protection. Manufactured in Clare's proven 320V Silicon-On-Insulator (SOI) process, the CPC1465 is packaged in a 16 pin SOIC or MLP.

Features

- Meets wetting (sealing) current requirements per ITU-T G.991.2
- Integrated bridge rectifier for polarity correction
- Uses inexpensive opto-coupler for DC signalling
- Electronic inductor, breakover, and latch circuits
- Current limiting and excess power protection circuits
- ANSI SHDSL and ISDN compatible
- MLT and SARTS compatible
- Excellent linearity (70dB typ.)

Applications

- ADSL2+ compatible with appropriate inductor
- SHDSL
- ISDN
- Router and bridge customer premises equipment
- Leased line equipment
- T1/E1 network line cards and repeaters
- Network Termination 1 (NT1) equipment
- Mechanized Loop Test (MLT) networks
- Switched Access Remote Test System (SARTS) networks

Line Card Access Switch (LCAS)

The Line Card Access Switch (LCAS) product family is an integral part of Clare's product portfolio for the telecommunications market. Clare's unique high-voltage Silicon-On-Insulator (SOI) process technology, manufactured in its state-of-the-art fab in Beverly, MA, provides the foundation for a multitude of silicon solutions that enable low power, high density line cards.

The LCAS product family consists of monolithic ICs that contain high-voltage switches for tip and ring line break, power ringing, line test access, test in access and ringing generator testing.

They provide the necessary functions to replace all 2-Form-C electromechanical relays found on both traditional voice and integrated voice and data (IVD) line cards found in Central Office, Digital Loop Carriers and Channel Banks. With the introduction of the next generation CPC759x family, Clare is poised to continue its leadership in high voltage switching applications. New features include:

- 1) TTL compatible inputs
- 2) Smart logic for safe power up and hot plug state control
- 3) Increased dv/dt immunity.

Features

- Small surface mount SOIC or Micro Leadframe Package (MLP)
- Monolithic IC reliability
- Low, matched on-resistance
- Built-in zero-cross switching
- Impulse noise reduction
- Current limiting, thermal shutdown and SLIC protection
- Robust power cross and lightning surge performance
- Ultra-low power consumption of <10.5 mW
- Pin-to-pin compatibility to the Legerity 7581, 7582, and 7583 SOIC products

Applications

- VOIP gateways
- Central Offices (CO)
- Digital Loop Carriers (DLC)
- Digitally Added Main Line (DAML)
- Hybrid Fiber Coax (HFC)
- Fiber in the Loop (FITL)
- Pair Gain systems
- Channel banks
- PBX systems

Line Card Access Switch (LCAS) Micro Lead-frame Package (MLP) Products

With the introduction of the Micro Leadframe Package (MLP), the same functionality and performance now comes at a fraction of the size and makes 32 channel (or greater) line cards a reality. Even compared to fourth generation EMRs, these MLPs offer a dramatic area and height savings of 65% and 80% respectively.

All LCAS versions listed below are available in an MLP package. The last digit in the part number indicates the logic version and is the same for both the MLP and SOIC versions.

Part Number	Package	W mm	L mm	H mm	Area mm ²	# of EMRs LCAS replaces	Area Savings vs EMRs

CPC7592Mx	16MLP	6	7	0.9	42	2	71%
CPC7593Mx	28MLP	7	11	0.9	77	3	65%
CPC7594Mx	16MLP	6	7	0.9	42	2	71%

Block Diagram

LITELINK™ Silicon DAA, Phone Line Interface

The LITELINK phone line interface is the industry's only single package silicon Data Access Arrangement, featuring a 32-pin, small outline, low profile, surface mount package. It is ideal for both voice and data (V.22bis to V.90/V.92) and applications in particularly dense circuit environments. The internal optical isolation barrier eliminates high cost transformer or capacitive isolation circuits. This solution saves cost relative to competitive circuits through reduced passive component count and smaller printed-circuit board space.

The $3kV_{rms}$ internal isolation barrier exceeds all worldwide regulatory requirements. The optical isolation barrier yields low distortion performance necessary for high speed communications. In addition, the LITELINK application circuit is capable of surviving 6kV (10usec x 700usec) lightning surge waveforms making it the most robust silicon DAA on the market.

LITELINK offers the lowest operational phone line quiescent current. The device easily interfaces to commonly available

standard single-ended or differential voice and modem codecs on the market. Contact Clare for information on codec reference designs that offer programmable AC termination impedance for global applications. LITELINK complies with international PSTN agency requirements.

The newest device is the CPC5622 which is part of the LITELINK III product family. It offers continuous Caller-ID (CID) signal reception which is ideal for telephony applications in countries where CID information is present before the ringing signal. The CPC5622 also offers both full and half wave ringing signal detection allowing the designer to chose the appropriate interface to the codec/DSP block.

Features

- Voice and data applications
- Modem DAA for speeds up to V.92
- Half-wave or full-wave ringing detection
- Worldwide telephone network compatibility
- Caller-ID reception
- Line side powered from telephone line
- 3.3 V to 5 V power supply
- Easy interface with modem ICs and voice CODECs
- High power transmit option for voice applications (>3 dBm)

Applications

- Computer telephony
- VoIP gateways
- PBXs
- Satellite set-top box
- V.92 modems
- Fax machines
- Voice mail systems
- Embedded modems
- Vending machines
- Automated banking
- Remote metering
- Surveillance
- Security systems

NOTE: For the CPC5603 and CPC5602 detail, please see "FETs, N-Channel Depletion Mode" section on page 30.

CPC5622 LITELINK III Block Diagram CPC5622 LITELINK III Reference Design Schematic

Clare's CPC5710N 8-pin SOIC is a versatile building block for designing telephone line monitoring circuits. High common-mode rejection ratio (>40 dB) and high input impedance makes the CPC5710N an excellent choice for tip/ring voltage monitoring, battery presence detection, line-in-use detection (another-phone-off-hook), polarity reversal, display feature (Caller ID) signal reception, ringing detection and discrete voice recording.

The CPC5710N high impedance input circuit eliminates phone line monitoring discrete components that reduce central office (CO) battery voltage to Customer Premise Equipment (CPE)

equipment. This allows the CPE equipment to work properly on long phone loops and meet difficult worldwide regulatory low CO voltage conditions. The high impedance resistive barrier application circuit is fully compliant to the EN60950 safety standard and meets the ITU-T K.21 over voltage and over current specifications. Common applications include telephony gateways, IP-PBX, computer telephony, embedded modems, set-top boxes, voice recording applications, and point-of-sale equipment.

Features

- Excellent common-mode rejection ratio (CMRR), >40 dB
- Supplied application circuits meet EN60950 Safety and ITU-T K.21 specification isolation requirements
- High input impedance circuit eliminates line voltage drop for better performance and compliance to worldwide specifications
- Small 8-pin SOIC
- Worldwide telephone network compatibility
- Full-wave ringing level detector comparator with internal threshold, large hysteresis, and logic-level output
- 3.3 V to 5 V operation
- High differential input impedance with very low common mode input impedance
- Fixed gain
- Differential or single-ended linear output
- TTL logic input
- CMOS logic output (TTL compatible)
- Virtually non-detectable in voice monitoring

Applications

In monitoring applications the CPC5710N can be used for:

- Display feature (caller ID) signal processing
- Line-in-use detection (another phone-off-hook)
- Ringing signal level detection
- Battery presence monitoring
- Tip and ring lead voltage monitoring
- Line polarity

Part Number	Power Supply
CPC5710	3.3V to 5V

APOH and Polarity Detection Application Circuit

FETs, N-Channel Depletion Mode

Clare's N-channel depletion mode Field Effect Transistors (FETs) utilize a proprietary third generation vertical DMOS process. The third generation process realizes world class, high voltage MOSFET performance in an economical silicon gate process. The vertical DMOS process yields a robust device for high power applications with high input impedance. These highly reliable FET devices have been used extensively in Clare's solid state relays for industrial and telecommunications applications.

The normally-on MOSFETs are well suited for low cost, pre-regulator applications that are tolerant of high voltage drop and power dissipation between the power source and the output regulator stage. The pre-regulator is particularly effective as an inexpensive solution for filtering AC line voltage variations in non-isolated DC power supplies as compared to switch mode power supplies or step down transformers.

Part Number	BV_{DSX} V	$R_{DS(ON)}$ Max Ω	$V_{GS(off)}$ Min V	$V_{GS(off)}$ Max V	I_{DSS} @ $V_{GS} = 0V$ Min mA	Package

Application - Pre-regulator Non-isolated Power Supply with Depletion Mode FET

Data Access Arrangement (DAA) Modules

The Cybergate family is Clare's turnkey modular DAA solution. The V.34 family provides the circuitry required in a single, completely functional DAA circuit in a 1.07" x 1.07" x 0.4" plastic module. This plug-and-play design allows the user to choose the necessary options to minimize costs, and in turn, maximize

value. Standard features include surge protection, transient protection zeners, ringing detection, hook-switch circuitry, gyrator circuitry (impedance balancing) and a transformer. Caller-ID (CID) and loop current detection are also available as options.

Features

- 28.8kbps (except for CYG2911 at 9.6kbps)
- Optional caller ID and loop current sense
- Ringing detection
- Low power hookswitch
- Surge protection
- Low THD
- Gyrator circuitry
- Meets most regulatory agency requirements

Applications

- Modems
- Remote data acquisition
- Fax machines
- Security/metering
- Computer telephony
- PBX
- Voice mail systems

*All of the parts listed are in a DIP package, operate using a 5V power supply, have a minimum On-hook impedance of 10 M Ω , Maximum Total Harmonic Distortion (THD) of 0.01% and a tip to ring surge protection voltage of 300V.

Embedded Modem Module (EMM)

The Embedded Modem Module combines a datapump and microcontroller with the Data Access Arrangement (DAA) to deliver an all-in-one solution for V.22bis modem transaction-oriented applications. This plug-and-play module provides a total solution complete with transferable FCC registration. It

supports a standard serial V.24 TTL interface to the DTE equipment. The CPC2400E features a quick handshake time of 1.6 seconds. This offers a clear advantage for short connection sessions when compared to V.34 and V.90 modems which have a data handshake period greater than 10 seconds.

Features

- Easy integration and installation
- Small footprint of 1.00" x 2.50"
- Low power consumption
- 5V Power supply operation
- Supports V.22bis, V.22, V.23
- FCC part 15B compliant
- FCC part 68 user transferable registration
- UL Approved

Applications

- Point-of-Sale (POS)
- Gaming equipment
- Utility metering
- Lock boxes
- Remote monitoring
- Embedded applications
- Medical appliances

Tone Signaling Products include Dual Tone Multi-Frequency (DTMF) Receivers, MF Trunk Signaling ICs and Call Progress Detectors, and Generators and Hook Switch Status Devices.

Call Progress Detectors and Generators

Clare's family of Call Progress Detectors and Generators provides an inexpensive method of detecting and generating common call progress tones including busy tone, dial tone, call waiting tones and others. The family includes both an inexpensive band detector and precise call tone detectors that detect individual tones. Detectors are available in both DIP and

SOIC packages and operate on a 3 V to 5 V supply. The call progress generator allows for a simple method of providing dial tone busy tone and other call progress tones in applications where a POTS interface is required such as VoIP or other network gateways.

Features

- Receive and generate common call progress tones
- Detectors operate with a single 3V to 5V supply
- Linear input (detectors) and output (generator)
- Inexpensive band detector with wide dynamic range (>38dB)
- Low power consumption
- Detectors available for both common call progress and SIT tones
- Available in both DIP and SOIC packages

Applications

- PBX circuits
- Billing systems
- Test equipment
- Point of Sale terminals
- Pay telephones

Part Number	Function	Detection Frequencies					Package Type
		Band	Dial Tone	Audible Ringing	Busy Tone	Special Information Tones (SIT)	
	315-640Hz	350 + 440Hz	440 + 480Hz	480 + 620Hz

Block Diagrams

Hook Switch Status Devices

M-949-01 Line Sense Relay

- Senses telephone line current from 18 to 125 mA
- Used by control circuitry for on-hook/off-hook monitoring, switch hook flash detection and rotary dial pulse
- Provides 1500V_{DC} coil-to-contact isolation
- Includes 1-Form-A relay contact
- Applications include central office products, PBX and key systems, rotary dial monitoring devices

M-949-11 Balanced Dual Coil Telephone Line Current Sensing Relay

- Senses telephone line current from 15 to 200mA
- Used by control circuitry for on-hook/off-hook monitoring, switch hook flash detection and rotary dial pulse
- Meets high isolation voltage requirement of 4000V
- Meets UL and British Standard specifications
- Includes 1-Form-A relay contact

M-959 Dial Pulse Counter and Hook Status Monitor

- Independent hook status monitoring
- Time-guarded dial pulse counting
- 10 or 20 PPS dialing speeds pin selectable
- Valid data output strobe

Block Diagram

High Voltage Products - Analog Switches and Display Drivers

The high voltage process technology used on these devices is Clare's reliable BCDMOS on SOI (Silicon On Insulator). This process offers unique performance features such as multiple 300V open drain FET devices and 200V bi-directional analog switch cells with 1 Amp peak current capability.

NEW - CPC7220/CPC7221 High Voltage 8 Channel Analog Switch

The CPC7220 and CPC7221 are low charge injection 8-channel high-voltage analog switch integrated circuits (ICs). These devices are capable of switching large load voltages and have a flexible load voltage range, e.g. V_{PP}/V_{NN} : +40V/-160V or +100V/-100V. Switch manipulation is managed by an 8-bit serial to parallel shift register whose outputs are buffered and stored by an 8-bit transparent latch. Level shifters buffer the latch outputs and operate the high voltage switches.

Features

- DC to 10MHz analog signal frequency
- 200 V peak to peak output switches
- Low quiescent power dissipation (< 1 μ A typical)
- Output on-resistance typically 20 Ω
- TTL I/O's for 3.3 V interface
- 28-Pin SOIC Package

Applications

- Ultrasound imaging
- Printers
- Industrial controls and measurement

Block Diagram

NEW - CPC6530 32-Channel Serial To Parallel Converter With Open Drain Outputs

The CPC6530 is a low-voltage serial input to high-voltage parallel output converter with open drain outputs. This device consists of a 32-bit shift register, 32 latches, and control logic to perform the polarity select and blanking of the outputs. The open drain n-channel MOSFETS have a 300V breakdown voltage rating and are capable of sinking 100mA of current.

Features

- 300V open drain MOSFETs
- 100mA minimum current sink
- 8 MHz shift register
- Polarity and Blanking inputs
- CMOS compatible inputs
- 44-lead surface mount package

Applications

- EL Display Driver
- Inkjet and electrostatic print heads
- Plasma, vacuum fluorescent and large matrix LCDs

Block Diagram

NEW - CPC6826 High Voltage EL Lamp Driver

The CPC6826 is an electroluminescent (EL) lamp driver designed for applications operating from an input supply voltage range of 1.8 V to 3.5 V. The architecture features an integrated boost switching supply with an H-bridge driver circuit to illuminate the EL lamp. Three passive components, an inductor, a capacitor and a diode are required to complete the boost switcher circuit. The internal high voltage H-bridge provides a nominal ± 75 V output between pins V_A and V_B.

Features

- 1.8 V to 3.5 V supply voltage
- DC to AC conversion
- Adjustable output frequency
- Adjustable switch frequency
- Output voltage regulation
- 150V_{PP} H-Bridge drive output
- Enable/disable function
- MSOP-8 Package

Applications

- Mobile cellular phones
- Keypad illumination
- Instrument panels

Block Diagram

Optically Isolated Gate Driver Circuits

The CPC1580 and CPC1590 are high speed Optically Isolated Gate Driver ICs. On-chip circuitry charges an external capacitor from the AC load voltage which eliminates the need for an external IC power supply. The Driver IC is ideal for low duty cycle switching applications.

Features

- Low drive power requirements (TTL/CMOS Compatible)
- Fast switching T_{ON}/T_{OFF} 20/200 μ sec
- Load Voltages up to 200V
- No external IC power supply

Applications

- Instrumentation
 - Multiplexers
 - Electronic switching
 - I/O Subsystems
 - Meters (Watt-Hour, Water, Gas)
- Medical Equipment (patient/equipment isolation)
- Security
- Aerospace
- Industrial controls

Operational temperature range of -40° to 85°C

Block Diagrams

Optically Isolated Dual MOSFET Gate Driver

The FDA215 is a Dual Optically Isolated Photodiode Array. The light activated array produces an open circuit voltage of 8 Volts. This device is suited for use in discrete solid state relay designs.

Features

- Isolated 5V photovoltaic output
- May be configured for AC and DC switching
- Floating outputs for parallel or series configuration

Applications

- MOSFET Driver
- Programmable control
- Process control
- Instrumentation

Operational temperature range of -40° to 85°C

Block Diagram

The Clare Solar Cell is a revolutionary new product offering that addresses the diverse needs and applications of the growing low power solar energy market. This technology development is based on Clare’s strength in photovoltaic silicon processing and IC packaging. The Solar Cell product family offers several open circuit voltage levels (4, 8 or 16 Volts) when activated by natural or artificial light. These voltage levels correlate to common circuit board power supply voltages making the solar cell ideal for battery charging applications and trickle charge power sources. Standard JEDEC SOIC package styles make

these Solar Cell products ideal for prototype and high volume production usage.

Clare’s flexible Solar Cell architecture facilitates product family growth by means of its scalable technology thus paving the way for future solar cell offerings with different voltage and current ratings. Additionally, since there is excellent isolation between the various circuit elements on the Solar Cell’s photovoltaic die, it is possible to add options such as power management or logic control circuitry with minimal incremental cost to the product.

Features

- Select from multiple voltage and current outputs
- 4 V - 16 V output
- 12 μ A - 100 μ A current output
- Provides true wireless power
- Triggers with natural sunlight or artificial light
- Semiconductor miniature size and reliability

Applications

- Portable Electronics
- Solar Battery Chargers
- Battery Operated Equipment
- Consumer Electronics
- Off Grid Installation
- Wireless Sensors and Detection
- Self Powered Sunlight/ Light Detection
- Self Powered Products
- Remote Installation

If your application requires electrically isolated TO-220 device, then it needs ISOPLUS220™ parts. We have replaced the normal copper lead frame with our proprietary lead frame to give it -

- Superior heat transfer junction to heatsink
- 2500 V isolation voltage
- Higher current and power control

Available products include

- MOSFETs
- IGBTs
- FREDs
- SCRs
- Rectifiers
- Schottky diodes

ISOPLUS247™, ISO264 and ISOPLUS264™

Isolating TO-247 power devices has never been easier than using our new **ISOPLUS247™** products. They're internally isolated with our proprietary "integrated leadframe" using our DCB ceramic substrate as part of the package!

The result -

- **Excellent thermal transfer** ($R_{thj\zeta}$)
- **High Isolation Voltage** ($V_{ISOL} > 2500$ V)
- **Increased Temperature & Power Cycling** capability
- **Reduced EMI/RFI** emissions due to lower stray capacitance (junction to heatsink).

ISOPLUS-DIL™

High Current low $R_{DS(on)}$ Trench MOSFET Six-Pack

New DCB based surface mount package for automotive applications

In the automotive industry the usage of electronics is growing each year, especially with MOSFET technology. Steering aids, valve control, active suspension and many other functions in a car are driven by MOSFET's. The trends in these applications are the usage of Trench MOSFET and miniaturization of the electronic components, which results in low inductance designs with low EMC disturbance, easy manufacturability and the most important one, reliability. IXYS has introduced the new GWM product series exactly for these applications fulfilling these market demands.

The standard GWM ISOPLUS-DIL (Dual-In-Line) package includes a Trench MOSFET Six-pack, also customized configurations can be integrated.

The ISOPLUS-DIL package is a new member of the IXYS ISOPLUS family. The IXYS ISOPLUS family is well known for its advantages; the expansion coefficient of the DCB is close to that of silicon which results in high temperature cycle reliability, the heat transfer through the ceramic is optimal, if the GWM is compared with standard solutions the current loops are reduced and also the parasitic capacity is reduced. Both results in better EMI behavior of the application. The advantages of the Direct Copper Bonded substrate results in a very reliable, high power density component. The GWM, targeted for the automotive segment, is tested according to the AEC-Q101.

The GWM ISOPLUS-DIL six-pack is a very compact and reliable solution for automotive applications, which contains the latest technology trench MOSFET's. With the electrical and mechanical properties of the GWM ISOPLUS-DIL, design-in and usability is improved compared to solutions currently used.

Features

- Low $R_{DS(on)}$
- Optimized intrinsic reverse diode
- High level of integration
- Multi chip packaging
- High power density
- High current power terminals (300 A, RMS)
- Auxiliary terminals for MOSFET control
- Terminals for soldering (wave or re-flow) or welding connections
- Isolated DCB ceramic base plate with optimized heat transfer
- 1000 V electrical isolation
- Logic level version feasible

Applications

- Automobile electric power steering
- Active suspension
- Water pump
- Automobile starter generator
- Propulsion drives
- Fork lift drives
- Battery operated equipment

Benefits

- Highest reliability
- Easy assembly
- Optimized EMI behavior
- Extremely low power loss

Thyristors, SCRs

(SCR = Silicon Controlled Rectifier)

Phase Control Thyristors

Thyristors are very rugged devices. Compared to all other controlled semi-conductor components, they feature the highest current capacity per chip area, especially at high voltage. They are mainly used as control devices in 50 and 60 Hz AC mains equipment.

Principal applications are static converter circuits for speed control of DC-drives, or switching and control functions for temperature, lighting, soft-start, etc. in single-phase and three-phase AC switch configurations. Phase control thyristors are

designed for optimal forward conduction and reverse blocking characteristics, due to only moderate requirements for turn-on and turn-off parameters.

Optional Accessories for Thyristor / Diode Modules

For module-types MCC 19, 26, 44, 56, 60, 72, 94 and 95 version 1:
Keyed Gate Cathode twin plugs with wire length = 350 mm;
gate = yellow, cathode = red

Type **ZY 200 L** (L = Left for pin pair 4/5)
Type **ZY 200 R** (R = Right for pin pair 6/7)

For ZY 180 and ZY 200: UL Styles 1385

For module types MCC/MCD/MCO 122, 132, 161, 162, 170, 200, 220, 224, 225, 250, 255, 310, 312, 500 and MII 400 (for MCD/MCO only L-type):
Keyed Gate Cathode twin plugs with wire length = 350 mm
gate = yellow, cathode = red

Type **ZY 180 L** (L = Left for pin pair 4/5)
Type **ZY 180 R** (R = Right for pin pair 6/7)

For module types MCC/MCD/MDD 220, 250, 310
Threaded spacer for higher Anode / Cathode construction:
Type **ZY 250** (material brass)

Design Information

For Thyristors, Diodes, Thyristor / Diode Modules and Rectifier Bridges

Surge current

The 60 Hz value of I_{TSM} is 10 % higher than the 50 Hz value
The I_{TSM} value at T_{VJM} is 10 to 15 % lower than the 45°C value

Limiting I^2t

50 Hz: I^2t (in A^2s) = $I_{TSM} (A) \cdot I_{TSM} (A) \cdot 0.005 (s)$; use rated I_{TSM} value (10 ms)
60 Hz: I^2t (in A^2s) = $I_{TSM} (A) \cdot I_{TSM} (A) \cdot 0.0042 (s)$; use 60-Hz-value of I_{TSM}

Forward current

The average current ratings in tables are mostly specified for temperature conditions of: $T_A = 45^\circ C$, $T_C = 85^\circ C$ or $T_C = 100^\circ C$.
For other temperature conditions, the current ratings can be calculated using the following formulas, applicable up to 400 Hz.

$$I_{TAV} = \frac{-V_{T0} + \sqrt{V_{T0}^2 + 4 \cdot k^2 \cdot r_T \cdot P}}{2 \cdot k^2 \cdot r_T} \quad \text{where} \quad P = \frac{T_{VJM} - T_C}{R_{thJC}} \quad \text{or} \quad P = \frac{T_{VJM} - T_A}{R_{thJA}}$$

I_{TAV} (A), P (W); V_{T0} (V); r_T (Ω), T_{VJM} ($^\circ C$), T_C ($^\circ C$), T_A ($^\circ C$)
 R_{thJC} (K/W), R_{thJA} (K/W)

$k^2 = 1$ for DC current
 $k^2 = 2.5$ for sinusoidal half wave current
 $k^2 = 3.0$ for 120° rectangular current
 $k^2 = 6.0$ for 60° rectangular current

The average forward current is limited by the RMS current value I_{TRMS} . When the **calculated** value I_{TAV} is higher than I_{TRMS}/k , replace it by $I_{TAV} = I_{TRMS}/k$.

3-phase PFC

“Vienna Rectifier” circuit

- wide input voltage range
- sinusoidal mains input currents in phase with mains
- boost converter operation:
 - input: three phase AC mains without neutral conductor
 - output: stabilized DC link with center point
- one module used per phase

For further information on this circuit please visit IXYS website <http://www.ixys.com>

Rectifier Bridges incorporating Fast Diodes

Power switching semiconductors are used in inverter systems with DC-Link. Due to high switching frequencies, harmonics and line distortion may be generated. It is important that the new designs reduce these influences and fulfill the EMI filtering requirements according to EMI/EMC VDE 0871 and other.

The noise level can be reduced by up to **10dB** when the input rectifier is equipped with Semi-fast diodes and is therefore optimised for turn off; resulting in a lower peak recovery current compared to non-optimised and normal rectifier diodes.

The noise level can be further reduced approximately by another **5dB** when using rectifier bridges equipped with Fast

Recovery Epitaxial Diodes (FRED) like module types VBE (single phase bridge) or VUE (three phase bridge). However these are more expensive but may be necessary in some applications to fulfill the VDE or other standards.

This behaviour has a direct influence on the design of the EMI filter networks with its capacitors and inductors of which the size and costs can be reduced.

More detailed information is available in the IXYS application note D98005E "Input Rectifiers with Semi-fast Diodes for DC Link" on www.ixys.com.

① Leads soldered on PCB board, T_s and $T_{VJ} = -40 \dots +125\text{ °C}$

Break-Over-Diodes Sets

We deliver also:

- Special selection of more than 2 pcs IXBOD1-... for every break down voltage of $V_{BO} > 2000\text{ V}$
- Example
type designation IXBOD Set SA05/00
 $V_{BO} = 4700\text{ V} \pm 100\text{ V}$
(we deliver 5pcs single selected IXBOD1-... in one plastic bag)
Customer use these products on PCB connected in series with parallel resistor $R = 10\text{ M}\Omega$ across each IXBOD

Ultra-fast Power MOSFET / IGBT Drivers

These ultra-fast high current drivers are optimized for high efficiency performance in the motor drive and power conversion applications. They are designed to switch largest MOSFETs and IGBTs with minimum switching times at frequencies to 10 MHz. These MOSFET/IGBT drivers are manufactured in industry standard outlines, which include TO-263, TO-220 and many IC packages offering superior thermal performance.

Features

- Wide operating voltage range from 4.5 V to 35 V
- Rated for -55 °C to +125 °C operation
- Very Low output impedance
- No internal cross conduction which allows operating frequency to 10 MHz
- Latch-up protected to rated reverse current
- Output Current - up to 30 A peak
- Very low thermal impedance for TO-263 & TO-220 packages
- Matched rise and fall times
- ENABLE pin for emergency shutdown
- TTL or CMOS input signals
- Grounded base tab in 8-Pin SOIC-CT, 14-Pin SOIC-CT, 16-PIN SOIC-CT and 28 Pin SOIC-CT packages for PC board cooling.

Applications

- Inverters
- SMPS Class D Amplifiers
- Power Factor Correction
- Motor drives
- Line drivers
- Traction
- Radiology and laser technology

Gate Drive Evaluation Boards

MOSFET/IGBT Gate Drive Modules/Gate Drive IC Evaluation Boards

The EV-Series MOSFET Gate Drive Modules are general purpose gate drive circuits designed to drive the DE-Series RF POWER MOSFETs, as well as industry-standard MOSFETs and IGBTs. Designed using IXYS/DEI gate drive ICs, they serve as a system development tool for the design engineer, and as a convenient platform for the evaluation of the DE-Series RF MOSFET transistors. The EVDD415 and EVIC420 are designed to drive DE-Series RF MOSFETs. The EVDI402, EVDD404, EVDD409, EVDI409 and EVDD414 gate drive modules are designed to drive MOSFETs or IGBTs in various package types, including TO-220, TO-247, TO-264 or SOT-227 packages.

The evaluation board design allows the MOSFET or IGBT to be attached to a heat sink, and in so doing the board assembly can be used as a ground referenced, low side power switch for both single-ended and push-pull configurations. They may be used as pulse width agile, high power switching modules in pulse generators, RF generators, pulsed laser diode drivers and other high voltage, high speed applications.

By utilizing design techniques developed by DEI, the EVDD 415 and EVIC 420 gate drive modules can drive DE-Series MOSFET transistors at frequencies up to 45 MHz, provide continuously variable output pulse widths from ~5ns to DC, and rise times of <3ns (actual performance is dependent upon the specific gate drive module and the MOSFET device used).

High Voltage Current Regulators

Features

- Extremely stable current characteristics 50 ppm/K
- Minimum of 450 V breakdown
- 40 W continuous dissipation

Applications

- Start-up circuits for SMPS
- PABX current sources
- Telephone line terminations
- Surge limiters and protection
- Waveform synthesizers
- Soft start-up circuits

Non-switchable Regulators

This is a family of extremely stable, 450 Volt (min.) current regulators. Temperature stability is based on a threshold compensation technique and uses IXYS' most recently developed high voltage process. Some specific applications include PABX current sources and line terminations, high stability voltage sources, surge limiters, fast reacting non-destruct fuses and start-up circuits. These regulators also replace power resistors in house-keeping supplies derived from the AC mains, dramatically reducing power consumption while permitting universal use from 110-240 V AC without part changes.

Switchable Regulators

The **IXCP10M45S** is an enhanced version of IXYS' family of high voltage current regulators. It is similar in all respects to the standard product, except that it can be switched off by applying a negative voltage to its control pin. Minimum breakdown voltage is increased to 450 V. For additional versatility, output current may be programmed by inserting a resistor between the negative output and control pins. A prime application to the switchable regulator is in house-keeping power supplies for switch-mode-power-supplies (SMPS), where shutting the regulator down once the SMPS is up and running reduces standby power consumption virtually to zero.

Characteristic

IXOLAR™ High Efficiency Solar Cells

Technical Information

Description

IXOLAR™ Solar Cells are IXYS' monocrystalline, high efficiency solar cell technology products incorporating an enhanced light trapping surface. There are 6 different cell sizes available: 36 mm², 72 mm², 120 mm², 240 mm², 360 mm² and 480 mm².

The IXOLAR™ Solar Cells are ideal for charging various battery powered and handheld consumer products such as mobile phones, cameras, PDAs, MP3-Players and toys. They are also suitable for industrial applications such as wireless sensors, portable instrumentation and for charging emergency backup batteries.

With an efficiency of typically 17%, these solar cells give the ability to extend run time even in „low light“ conditions and increase battery life and run time in a small footprint, which can be easily accommodated in the design of Portable Products.

IXOLAR products have a very good response over a wide wavelength range and therefore can be used in both indoor and outdoor applications.

Product and Ordering Information

t	cell thickness	250	μm

Features

- Monocrystalline silicon technology
- High efficiency
- Enhanced light trapping surface texturization

Applications

- Battery chargers for portables such as cell phones, PDAs, GPS-Systems, ...
- „Green“ electricity generation
- Power backup for UPS, Sensors, Wearables

Advantages

- Long life and stable output
- Solderable back-side metallization
- Bondable front-side metallization
- Available in die and wafer form

*) All values measured at Standard Condition:
1 sun (= 100 mW/cm²), Air Mass 1.5, 25°C

IXOLAR™ High Efficiency Solar Bits

Description

IXOLAR™ Solar Bits are IXYS' product line of coated monocrystalline, high efficiency solar cell products using IXYS' XOD17 bondable solar cell dies. Solar Bits have reflow solderable surface mount packages, they are available in tape and reel packages and can be automatically pick and place mounted. There are 2 different Solar Bits available with different voltage and current output.

The IXOLAR™ Solar Bits are ideal for charging various battery powered and handheld consumer products such as mobile phones, cameras, PDAs, MP3-Players and toys. They are also suitable for industrial applications such as wireless sensors, portable instrumentation and for charging emergency backup batteries.

With a cell efficiency of typically 17%, Solar Bits give the ability to extend run time even in „low light“ conditions and increase battery life and run time in a small footprint, which can be easily accommodated in the design of Portable Products. The design allows to flexibly connect Solar Bits in series and/or parallel to perfectly meet the application's power requirements.

IXOLAR products have a very good response over a wide wavelength range and therefore can be used in both indoor and outdoor applications.

Product and Ordering Information

Part Number	Open Circuit Voltage [V]	Short Circuit Current [mA]	Typ. Voltage @ P_{mpp} [V]	Typ. Current @ P_{mpp} [mA]
► XOB17-12 x 1	0.63	42.0	0.51	39.0
► XOB17-04 x 3	1.89	12.6	1.53	11.7

(all parameters given are typical values)

Dimensions (L x W x H): 22 x 7 x 1.4 [mm]

Solar Bit Weight: 0.5 grams

Solar Bits are compliant to the RoHS Norm.

Solar Cell Electrical Characteristics

Symbol	Cell Parameter	Typical Ratings *)	Units

$\Delta J_{sc}/\Delta T$	short circuit current temp. coefficient	0.12	mA/(cm ² K)

*) All values measured at Standard Condition: 1 sun (= 1000 W/m²), Air Mass 1.5, 25°C

Features

- Monocrystalline silicon technology
- High efficiency outdoor and indoor
- Long life and stable output
- Sealed Package
- Surface Mount Package
- Reflow Solderable
- Very high mechanical robustness

Applications

- Battery chargers for portables such as cell phones, PDAs, GPS-Systems, ...
- „Green“ electricity generation
- Power backup for UPS, Sensors, Wearables

Advantages

- Automatic Pick & Place Mounting
- One Product for Multiple Applications
- Flexible Integration into the Application

Direct Copper Bonded Ceramic Substrates

DCB and DAB Ceramic Substrates (Al₂O₃ or AlN)

IXYS manufactures **Direct Copper Bonded** substrates on aluminum oxide (Al₂O₃) or aluminum nitride (AlN) base. DCB ceramic substrates form the basis for new product ideas and electronic developments with a high degree of integration.

Standard bonded DCB panel dimensions are:

Unclad aluminum oxide ceramic			
Al ₂ O ₃ content		> 96	%
dimensions		138 x 190.5, 115 x 165*	mm
usable area	max.	130 x 180, 107 x 156*	mm
thickness		1.00, 0.63, 0.38, 0.25	mm
arc through voltage		10	kV
thermal conductivity		> 24	W/m · K
Conduction layers - both sides			
copper thickness		0.3 (< 0.3 on request)	mm
conductor width	min.	0.3 + / - 0.2	mm
conductor spacing	min.	0.4 + / - 0.2	mm
spacing conductor/edge of ceramic	min.	0.35 + / - 0.2	mm
surface finishes available		bare copper; nickel plated; nickel + gold plated	
peel-off resistance (DIN 532282)	min.	9	N/mm
DCB ceramic substrate			
application temperature range		-55...+850	°C
resistant to hydrogen	max. up to	400	°C
thermal expansion coefficient	typical	7.4 x 10 ⁻⁶	K ⁻¹
dimensions according to customer specific drawing			

DCB parts are available as:

- bonded plate
- bonded and patterned plate
- prelasered, unbroken plate
- individuale substrates

ALN - DCB on request

* = (for 0.25 mm thk.)

Patterned DCB substrates can be manufactured to customers' drawings.

DCB ceramic substrates fulfill several functions:

- carriers for the semiconductor chips and connection clips
- circuits similar to that on a PC board
- electrical isolator for separating the "current paths" from the "heat paths"
- transfer medium for the heat dissipation from the active parts into the heat sink.

Our comprehensive range of rectifier diodes offers class leading performance and reliability. Devices with blocking voltages from 200V up to 6kV and average current ratings up to 8405A, T_K 55°C.

Optimised to offer low conduction losses, these devices are ideally suited to line frequency applications including input

rectifiers for variable speed drives, traction converters, trackside substations, welding and DC power supplies.

Utilising compression bonded, alloyed Silicon wafer construction, these devices feature low thermal impedance and high overload capacity and are designed to survive even the most arduous applications.

Fast Recovery Diodes are an essential complement to any switching device and are more often than not the limiting factor in the design and performance of modern power converters. To address the needs of our customers, we have developed an unparalleled range of Fast Recovery Diodes.

These diodes are available with blocking voltages up to 6kV making them suitable for operation with DC link voltages up to 3.3kV and average current ratings to 4kA depending upon type. The devices utilise compression bonding along with both

alloyed and floating silicon technologies to deliver robust devices that you can rely on in demanding applications.

This range has been re-classified as follows to aid appropriate device selection; **Fast Recovery, Soft Recovery, Extra Fast Recovery Diodes and HP Sonic-FRDs™.**

Fast Recovery Diodes: These parts are particularly suitable for use as antiparallel diodes in Gate Turn-Off thyristors and Fast Thyristor inverters, and as series and freewheel diodes for choppers.

Soft Recovery Diodes - Capsule Types

These parts are particularly suitable where soft recovery is required, such as RCD snubber, voltage clamping and snubberless applications.

High Power Sonic-FRDs™ - Capsule Types

Introducing a new world-leading class of ultra fast and ultra soft recovery diode available from 1.7kV to 4.5kV in current ratings from 300 to 2500A. These diodes incorporate a unique manufacturing process and novel lifetime control to offer a class leading trade-off between conduction and switching losses. Their exceptionally wide safe operating area (SOA) makes

them the number one choice for freewheeling diodes for snubberless IGBT and IGCT applications. In fact, most applications which require a fast, low loss diode can benefit from this new technology - for example, traction, medium voltage drives, induction heating and pulsed power applications.

We provide one of the most comprehensive ranges of standard phase control thyristors available in the Industry.

Devices with voltage ranges from 600V up to 4.5kV are available, making them suitable for applications with line voltages from 230V to over 1kV (higher voltage applications are now served by our range of Medium Voltage Thyristors).

Westcode is a leading supplier of phase control products into demanding markets such as industrial DC drives, induction melting, marine/rail propulsion systems, wind power converters, electrochemical power supplies and soft starters.

These devices are optimised to give low conduction losses and are primarily intended for applications from line frequency up to 400Hz.

The Wespac outline is a new concept in phase control thyristors for applications requiring devices rated to 2200V. It gives the maximum power rating for weight and volume without compromising on quality and reliability. It also gives the maximum current rating and lowest thermal resistance for the package size.

Medium voltage applications place additional demands on phase controlled thyristors. To meet these demands we have developed a comprehensive range of thyristors optimised for medium voltage applications. As voltages increase, so do switching losses and turn-off time – to a point where they become significant in line frequency applications.

Our patented distributed gate architecture ensures excellent switching performance over a wide range of voltage, current and di/dt. Device lifetime is also engineered to achieve an optimum balance between conduction losses, commutation losses and turn off time to give maximum power handling from line frequency to 400 Hz. This also gives significant benefits when series or parallel connection of devices is required.

Medium voltage thyristors are available from 3.2 kV up to 6.5 kV with silicon diameters from 38 mm to 100 mm making them particularly suitable for high power converters such as medium voltage DC drives, medium voltage soft starts and utility applications such as HVDC, static VAR compensators, excitation and transfer switches.

We recognise the importance of reliability in these large, capital intensive applications and as a result we subject these parts to extended levels of both routine and type testing to ensure that your investment gives years of trouble free service.

Under development

We are widely acknowledged as the global leader in fast switching thyristor technologies.

Devices with blocking voltages up to 4.5kV and current ratings up to 4kA are available with turn off times as low as 10µs. Our patented distributed gate architecture together with highly efficient axial lifetime control produce a unique combination of high di/dt capability, fast / soft recovery and low conduction losses.

Fast Turn-Off and Distributed Gate Thyristor devices allow the development of highly efficient, compact and reliable high frequency resonant converters for demanding applications such as induction heating, traction and UPS.

Additionally these devices make an excellent choice for fast high-energy switches such as pulsed power and crowbars. As with all of our high power semiconductors, these parts utilise advanced compression bonded construction ensuring long term reliability in applications subject to repeated power cycles.

Westcode "P" series of fast switching thyristors have regenerative gate structure to ensure low switching losses and high di/dt performance. "P" Series devices are particularly attractive to; Inverter, DC chopper

drives, UPS and Pulse Power applications. In addition to pressure contact technology these devices offer lower reverse recovery charge values, low forward switching losses and high reliability.

Recognised as the worldwide leader in distributed gate thyristor technology, these devices are available with blocking voltages to 5.2kV and currents to 3kA, with t_q from 10 to 300 μ s.

The unique distributed gate design and lifetime control features give these devices both high di/dt capability and fast low recovery turn-off, while maintaining a low forward voltage drop.

Ideally suited to applications including; induction heating, power supplies, high frequency inverters/converters, UPS and pulse power.

We offer a broad range of high specification devices incorporating advanced features such as buffer layer, fine pattern and transparent emitter technologies.

Offering both symmetrical devices for applications with a reverse blocking requirement e.g. current sourced inverters and anode shorted devices for applications where no reverse blocking requirement exists e.g. voltage sourced inverters.

Devices with voltage ratings to 6kV (3.8kV DC link) and controllable current ratings of up to 4kA are available to meet the toughest demands in applications such as traction propulsion and auxiliaries, AC industrial drives, FACTs and active VAR controllers.

Gate Turn-Off Thyristors are still the component of choice when it comes to very high power converters and we remain totally committed to this technology for the foreseeable future.

We have long since been at the forefront of solid state pulsed power technology, offering custom solutions to complex pulsed power problems. Pulse thyristors are, in essence, optimised Gate Turn-Off thyristors and as such we are able to offer a flexible range of parts depending upon customer needs.

Devices with voltage ratings to 6kV (3.8kV DC link), pulsed currents to 150kA peak and di/dt capabilities to over 30kA/μs are available.

A selection of preferred parts is shown here, for other parts and technical support please contact the Westcode factory.

As a pioneer of Press-Pack IGBT technology, we are able to offer a range of class leading devices with voltage ratings of 2.5kV (1.25kV DC link) and 4.5kV (2.8kV DC link).

The construction of these devices is totally free from wire and solder bonds which all but eliminates the problems of mechanical fatigue associated with conventional modules. Internal stray inductance in both the gate connections and emitter connections is vastly reduced when compared to conventional modules leading to improved ruggedness and short circuit behaviour, which is further enhanced by direct cooling of the emitter side of the chip.

These devices are based on a state-of-the-art soft punch through (SPT) process, which yields exceptional values $V_{CE(sat)}$ and quiet switching behaviour despite the high voltage ratings, yet the devices feature a positive temperature coefficient making them suitable for reliable parallel operation.

Devices are available with or without integral anti-parallel diode – a range of complementary High Power Sonic-FRDs™ optimised for use with these IGBTs are available, please contact your representative for further details.

The press pack construction offers several advantages over conventional IGBT modules.

- They exhibit exceptional power cycling performance – typically an order of magnitude better than modules – making them highly suited to applications such as induction heating and mass transits where there are repeated cyclic power demands.

- They are explosion rated making them a good choice in critical applications such as mining, the petro-chemical industry, and transportation applications.
- They have a stable short circuit failure mode which, as well as safety benefits, makes them an ideal choice for medium and high voltage applications where series connection is required. Press-pack construction is the obvious choice where series connection is needed and the short circuit failure mode allows for the design in of n+1 redundancy. Typical examples include HVDC, active VAR controllers and medium voltage drives.
- They are largely backwardly compatible with standard 2.5kV and 4.5kV Gate Turn-Off thyristors (including GCTs) in many applications such as AC drives. This makes these parts a simple and economical path to upgrade or refurbish equipment that previously used Gate Turn-Off thyristors, such as locomotives or medium voltage drives.
- They are suitable for all cooling options including direct liquid immersion.
- Applications include Medium Voltage drives, traction (main drives and auxiliaries), Utilities (HVDC and Active VAR controllers), motor control, pulsed power and induction heating power supplies. Press-pack IGBTs are particularly suited to Safety critical applications for the mining and petrochemical industries.
- Complementary gate drives, mounting clamps and passive components are available.

Under development

High Voltage IGBT Gate Drive Units – C0030BG400

The C0030BG400 is a single channel 30A peak rated gate drive unit (GDU), suitable for low and high side applications with DC link voltages of up to 3.5kV (5kV available on request) and with dv/dt immunity of over 100kV/μs.

This GDU performs all of the necessary supervisory functions including under voltage lockout and SCSOA protection with user configurable response and feedback. The unit requires a simple 15V DC power supply and features fibre optic command and feedback signals.

Type of IGBT	$R_{g(on)}$ W	$R_{g(off)}$ W	GDU part

T0800TA45E	4.7	3.3	C0030BG400SAN
T0900EA45A	3.9	2.7	C0030BG400SAP
T1200EA45E	3.3	2.2	C0030BG400SAR

This GDU is capable of driving virtually all IGBTs including our range of press-pack devices at frequencies from DC up to 20kHz with no duty cycle limitations.

Options include standard variants set up for use with each of Westcode's range of IGBTs (see table) and the core module for integration into end user PCBs. Additionally our application engineers can develop semi-custom solutions based around the standard core module.

Features

- 30A peak drive current (500ns rise time)
- 10kV AC rms isolation test
- Partial discharge free up to 4kV AC rms
- 100kV/μs dv/dt immunity
- Temperature range –40°C up to +70°C (–55°C up to +80°C available)
- ±15V gate drive voltage
- Standard HP Versatile Link™ Fibre Optic links
- Status feedback signal
- User configurable SCSOA protection

The launch of this new complementary product demonstrates our continued commitment to provide our customers with complete solutions for power electronics and further strengthens our assemblies' capability. This GDU also provides our customers with a rapid route to prototype with our range of high voltage press-pack IGBTs without having to solve the additional problems associated with high isolation voltage gate drives.

Power Semiconductor Assemblies from IXYS and Westcode

WESTCODE

Power Semiconductor Assemblies

From discrete devices to complete assemblies, our customers can procure our products in whatever form suits their needs on a global basis. Supply management is critical to every manufacturer and reducing costs without compromising quality is essential. Our experienced, international, team of engineers is on hand to help our customers to get more from their products and keep at the forefront of technology in an increasingly competitive marketplace.

Standard Assemblies

We have a comprehensive range of standard assemblies for all of the common converter topologies utilising either natural air, forced air or liquid cooling. These well-proven designs provide an economical alternative to in house design and assembly of discrete parts. These assemblies are available on short lead-times to suit most common line voltages and current ratings from 35A to 15kA.

Pulsed Power

As a pioneer in the development of solid state pulsed power components and systems, we are able to deliver anything from discrete components to fully integrated energy transfer switches. With systems successfully delivering voltage ratings of over 50kV and pulsed currents to 140kA, we have wealth of experience to put at your disposal. Our modular design solutions based on either pulse thyristor or press-pack IGBT technology and integrating control and protection functions provide you with a flexible "black box" approach to energy transfer problems.

We are involved with pulsed power on global basis, working with prestigious research organisations such as CERN, Switzerland as well as medium volume manufacture for emerging commercial applications such as laser supplies, PUV and PEF sterilisation, magnetisation and metal forming.

We have a philosophy of working closely with our customers to ensure that we deliver the right solution in the right time and right price – first time and every time.

Custom Assemblies

With over 70 years of experience in power circuit design and manufacture, our dedicated team of design engineers can deliver custom solutions for a whole range of design problems ranging from simple crowbar applications to complicated multi-megawatt power converters. Utilising the latest 3D modeling techniques, we can reduce the cycle time from concept to manufacture and ensure successful system level integration into our customers equipment.

Transportation

We have a long association with the railway industry and over the years have gained an enviable reputation within railway industry as a solution provider. Using our experience and wide ranging contacts within the industry, we are able to offer assistance in tackling issues such as component obsolescence, improving power equipment reliability, contract maintenance of power modules, refurbishment of power electronics and upgrades to existing systems.

Silicon Assemblies

A wide range of units is available, incorporating international standard outline silicon semiconductors. Westcode products have gained a worldwide reputation for quality in military, industrial and domestic applications.

Standard extruded aluminium heatsink profiles are used for mounting discrete semiconductor devices in various configurations, for example:

- Single-phase diode bridges with current ratings from 70 to 5170 Amps DC
- Single-phase half or fully controlled bridges from 35 to 2200 Amps DC
- Three-phase diode bridges with current ratings from 100 to 7190 Amps DC
- Three-phase half or fully controlled bridges from 45 to 3790 Amps DC
- Hexaphase single way diode assemblies from 200 to 14380 Amps DC
- Hexaphase single way Thyristor assemblies from 90 to 7580 Amps DC
- AC Regulators, single and three phase, from 40 to 2940 Amps RMS

Water Cooled AC Regulators

Included in our standard range are solid state, water cooled AC Regulators for resistance welding, with ratings from 315 to 3020 Amps RMS.

Also available are water cooled, single and three phase assemblies from 1200 to 6000 Amps DC.

All the above range is suitable for 440 VRMS 50Hz mains operation.

Outlines on pages 188 - 224

Working systematically to the highest international standards, we can give your equipment a new lease of life and help protect your investment in these valuable assets. For larger projects, such as fleet wide re-fits, we are able to work within a consortium of specialist companies to ensure that you have the right skills to hand to deliver a turnkey solution to your requirements.

Beyond Semiconductors

Our flexible manufacturing facility is able to readily adapt to our customers needs. In addition to power semiconductor assembly, we can offer complementary sub-assemblies to our customer's requirements, such as fuse panels and capacitor banks as well as contract manufacture to your designs.

Application and Engineering Support

Our highly experienced technical team is on hand to provide our customers with first class support for everything from the application of our range of discrete devices to the design and development of complex systems. We can help you from concept through design to manufacture and test, working closely with you at every step of the way.

Components

We offer a full portfolio of components which are complementary to our range of power semiconductors including:

Heatsinks Coolers Mounting Clamps
Ultra Rapid Semiconductor Protection Fuses
Capacitors for Power Electronics
Gate Drive Units

A standard assembly module provides the basic building block for this new range of assemblies.

Assembly modules can incorporate either single or dual devices and allow for the building of; single-phase diode and thyristor bridges, 3-phase diode and thyristor bridges, or 6-phase single way diode and thyristor assemblies.

A custom built assembly can be provided when a standard solution is not suitable.

Cooling for each module section is provided by the use of a low noise 115/230V ac fan which is protected against overloading by an integral thermal cut-out.

Surge suppression and fusing provides reliable and safe operation. Surge suppression (protecting the devices from voltage transients) and high speed fuses (to protect against short circuit) are available. Contact Westcode for details.

All plastic components are UL recognised and meet the requirements of the European Union Directive 2002/95/EC covering the restricted use of certain hazardous substances in electrical and electronic equipment.

ISO 9000 2000 provides the standard against which all our products and services are measured.

Westack - Modular Solutions are available in 6 standard configurations, others by request.

Capsule Mounting Clamps

The "Bar" type clamp uses a two rod system with a straight bar spring that is bent over a central point to give the clamping force on the device. This force is achieved when the indicators, metal shims at each end of the clamp, become just trapped. (CMK 9000 uses a disc spring stack).

The "Box" type clamp uses a four bolt system with disc springs and the correct force on the device is achieved when the bottom of the box just touches the heatsink.

As the force indication is contained within these clamps, special equipment or torque spanners are not required. The clamps can therefore be reset to the correct force at any time, using only a box spanner.

Box clamps are suitable for devices with 19mm, 25mm or 34mm diameter mounting surfaces and of 13.8mm, 14.6 or 26.2mm nominal thicknesses respectively.

Bar clamps are suitable for devices with 19mm to 125mm diameter mounting surfaces and 450kgf to 9000kgf clamping forces.

The technical drawing shows two views of a bolt assembly. The top view is a side elevation showing a bolt passing through a plate. Dimensions include: total length max. 20.32, distance from head to first hole center max. 10.2, distance between hole centers 2, distance from second hole center to nut max. 4, nut height 4, washer thickness 2.6, and bolt head diameter 4.4. The bottom view is an end view of the hexagonal head, showing a width across flats of SW 11, a radius of 7.8, and a central hole diameter of 0.5. The thread is specified as 10-32 UNF.

X206b DO-203 AB [M] (DO-5)

Technical drawing of a 1/4 inch hex head bolt. The drawing includes two views: a front view (top) and a top view (bottom). The front view shows a hex head with a central hole, a hex nut, and a threaded shank. Dimensions include: head width 7, head hole diameter 4.1, head height 6.1, hex head thickness 3, hex head to nut distance max. 27, nut height max. 13, nut thickness 6, shank length 11.3, and shank diameter max. 2. The top view shows the hex head with a central hole and a hex nut. Dimensions include: head width 13, head hole diameter 10, head thickness max. 16, and shank diameter SW 17. The shank is labeled 1/4"-28UNF.

W16 - 101A235

Technical drawing of component W16 - 101A235. The side view shows a vertical assembly with a top flange, a central shaft, and a base. Dimensions include: top flange diameter $\phi 5.1$ MIN, shaft diameter $\phi 1.4$, a 17 MAX dimension for the upper section, a 9.9 MAX dimension for the lower section, a 26.92 A/F MAX dimension for the base, a 11 MAX dimension for the base flange, a 29 MAX dimension for the base height, a 20.5 MAX dimension for the base thickness, and a 1/2"-20UNF-2A thread. The top view shows a circular flange with a 2 MIN dimension for the central hole.

W17 - 101A231

Technical drawing of component W17 - 101A231. The side view shows a vertical assembly with a top flange, a central shaft, and a base. Dimensions include: top flange diameter $\phi 7.1 \pm 0.1$, a 10.5 MAX dimension for the upper section, a 10.5 MIN FLAT dimension for the upper section, a 170/157 dimension for the upper section, a 55 MIN BEND HEIGHT dimension for the upper section, a 29 MAX dimension for the base, a 26.92 A/F MAX dimension for the base, a 11 MAX dimension for the base flange, a 174 MIN dimension for the base height, a 20.5 MAX dimension for the base thickness, and a 1/2"-20UNF-2A thread. The top view shows a circular flange with a 10.5 MAX dimension for the central hole, a 16.5 dimension for the central hole, and a 7.9 MAX dimension for the central hole. The base is labeled "COLOUR RED" and "COLOUR WHITE".

W18 - 101A225

Technical drawing of component W18 - 101A225. The side view shows a vertical assembly with a top flange, a central shaft, and a base. Dimensions include: top flange diameter $\phi 7.8$ MAX, a 19 MAX dimension for the upper section, a 11 MIN FLAT dimension for the upper section, a 27.4 MAX dimension for the upper section, a 31.62 / 31.41 A/F dimension for the base, a 3.6 / 2 U/CUT x $\phi 16.8$ MIN dimension for the base, a 16.0 MAX dimension for the base flange, a 82 MIN BEND HEIGHT dimension for the base, a 210 ± 10 dimension for the base height, a 21 MAX dimension for the base thickness, and a 3/4"-16UNF-2A thread. The top view shows a circular flange with a 19 MAX dimension for the central hole, a 7.8 MAX dimension for the central hole, and a 11 MIN FLAT dimension for the central hole. The base is labeled "COLOUR RED" and "COLOUR WHITE".

W19 - 101A334

Technical drawing of component W19 - 101A334. The side view shows a vertical assembly with a top flange, a central shaft, and a base. Dimensions include: top flange diameter $\phi 93$, a 54 MAX dimension for the upper section, a 20' $\pm 5'$ dimension for the upper section, a 26.5/25.5 COMPRESSED HEIGHT dimension for the base, a 22 MIN dimension for the base, a 62.85 dimension for the base, and a 62.85 dimension for the base. The top view shows a circular flange with a 54 MAX dimension for the central hole, a 20' $\pm 5'$ dimension for the central hole, and a 26.5/25.5 COMPRESSED HEIGHT dimension for the base. The base is labeled "CATHODE TERMINATION TAB 6.3 x 0.8 THK." and "GATE TERMINATION TAB 4.8 x 0.8 THK."

W20 - 100A303

Technical drawing of component W20 - 100A303. The side view shows a vertical assembly with a top flange, a central shaft, and a base. Dimensions include: top flange diameter $\phi 9.73$ MAX, a 2 APPROX dimension for the upper section, a 10 APPROX dimension for the upper section, a 26.92 AF MAX dimension for the base, a 29 MAX dimension for the base, a 11.9 MAX dimension for the base flange, a 20.7 MAX dimension for the base height, and a 1/2"-20UNF-2A thread. The top view shows a circular flange with a 2 APPROX dimension for the central hole, a 10 APPROX dimension for the central hole, and a 26.92 AF MAX dimension for the base. The base is labeled "HOLE FOR M5 SCREW." and "POLARITY".

W21 - 100A294

Technical drawing of component W21 - 100A294. The side view shows a vertical assembly with a top flange, a central shaft, and a base. Dimensions include: top flange diameter $\phi 7.1$, a 16.5 MAX dimension for the upper section, a 10.5 MIN FLAT dimension for the upper section, a 117/110 dimension for the upper section, a 29 MAX dimension for the base, a 26.92 AF MAX dimension for the base, a 11.9 MAX dimension for the base flange, a 20.7 MAX (M12) 16.3 MAX (3/8" UNF) dimension for the base, and a 3/8"-24UNF-2A thread. The top view shows a circular flange with a 16.5 MAX dimension for the central hole, a 10.5 MIN FLAT dimension for the central hole, and a 26.92 AF MAX dimension for the base. The base is labeled "POLARITY" and "UNDERCUT $\phi 9.73$ MAX x 2.5".
